Project Title	Pesonalized Networking Assistant
Maximum Marks	5 Marks

Project Proposal Report

Project Overview	
Objective	To design and develop an AI-powered networking assistant that generates personalized, context-aware conversation starters for professionals attending networking events.
Scope	what the project will and will not deliver. It helps set clear expectations and prevents scope creep.
Problem Statement	
Description	Professionals often struggle to initiate meaningful conversations at networking events due to a lack of personalized, context-aware icebreakers and the absence of real-time information access, which leads to missed opportunities and reduced networking effectiveness.
Impact	This limits professional growth, diminishes confidence, and prevents individuals from building valuable connections, ultimately hindering career advancement and business development..
Proposed Solution	

Approach	The Personalized Networking Assistant is an AI-powered web application designed to help professionals generate personalized, context-aware conversation starters for networking events.
Key Features	Generates personalized, context-aware conversation starters using GPT-2 based on user interests and event descriptions.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	T4 GPU
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	1 TB SSD
Software		
Frameworks	Python frameworks	Flask
Libraries	Additional libraries	scikit-learn, pandas, numpy, matplotlib, seaborn
Development Environment	IDE	VS - Code
Data	Source, size, format	Kaggle dataset, 614, csv UCI dataset, 690, csv
