

Technology Stack

Date	28 June 2026
Team ID	XXXXXX
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Define Your Technology Stack:

Python + FastAPI backend with DistilBERT and GPT-2 AI models, Streamlit frontend, Wikipedia API for fact-checking, and JSON storage.

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	- Streamlit - Python-Dotenv	- Interactive UI framework for building web applications - Environment variable management for configuration

2	Backend / Server-Side	• Python • FastAPI • Uvicorn • Pydantic • Transformers • GPT-2 • DistilBERT • Wikipedia-API	• Core programming language • REST API framework • ASGI server • AI/ML models • Data validation • Conversation generation • HTTP client • Fact-checking • Data processing
3	Database / Data Storage	JSON (JavaScript Object Notation)	JSON (JavaScript Object Notation) is a lightweight, human-readable data format used to store and exchange structured information. It uses key-value pairs and arrays, making it easy for both humans and machines to read and write.
4	Cloud / Hosting / Deployment	• AWS EC2 • Google Cloud Run • Hugging Face Spaces	• AI/ML projects • Enterprise-grade hosting

5	Version Control & CI/CD	• Git	Git is the primary version control system used in this project. It is a distributed version control system that tracks changes in source code during software development.
6	Third-Party APIs / Other Tools	• Wikipedia API • News APIs • Wikidata	• Free, reliable, comprehensive • Computational knowledge • Structured knowledge
