

Project Executable Files

Date	30 June 2026
Team ID	xxxxxx
Project Name	Personalized-Networking-Assistant
Maximum Marks	3 Marks

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	Yes
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

components/	# Reusable Components
__init__.py	
sidebar.py	# Sidebar navigation
header.py	# Page header
utils/	# Frontend Utilities
__init__.py	
api_client.py	# API communication
tests/	# Test Suite
__init__.py	
conftest.py	# <u>Pytest</u> configuration
test_event_analyzer.py	# Unit tests for event analyzer
test_topic_generator.py	# Unit tests for topic generator
test_fact_checker.py	# Unit tests for fact checker
test_api_routes.py	# Integration tests for APIs
test_services_integration.py	# Service integration tests
performance/	# Performance Tests
locustfile.py	# Locust load testing
data/	# Data Storage (JSON files)
<u>users.json</u>	# User profiles
<u>events.json</u>	# Event contexts
<u>sessions.json</u>	# Networking sessions
<u>starters.json</u>	# Generated starters
<u>factchecks.json</u>	# Fact-check results
<u>history.json</u>	# Conversation history
<u>feedback.json</u>	# User feedback
<u>logs.json</u>	# System logs
venv/	# Virtual Environment (ignored)
requirements.txt	# Python dependencies
setup.bat	# Windows setup script
deploy.bat	# Windows deployment script
run_tests.py	# Test runner
<u>.gitignore</u>	# Git ignore file
<u>.coveragerc</u>	# Coverage configuration
pytest.ini	# <u>Pytest</u> configuration
README.md	# Project documentation
LICENSE	# MIT License
PROGRESS.md	# Project progress tracker

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	http://localhost:8501 (Frontend (Streamlit)) http://localhost:8000 (Backend (FastAPI))

Repository Link	https://github.com/haswanth63/Personalized-Networking-Assistant
Demo Video Link	https://drive.google.com/drive/folders/1Zg-kXJqg8cz9zkIqTEU7szf-OdeGka2u?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Step 1: Get the Project

Download from GitHub: <https://github.com/haswanth63/Personalized-Networking-Assistant>

- Navigate to project folder: **cd Personalized-Networking- Assistant**

Step 2: Create and Activate Virtual Environment

Create virtual environment: **python -m venv venv**

Activate virtual environment: **venv\Scripts\activate**

You should Check : (venv) appearing at the beginning of your command prompt.

Step 3: Install Dependencies

Install all dependencies: **pip install -r requirements.txt**

Step 4: Verify Installation

```
python -c "import fastapi, streamlit, transformers, torch, requests, pandas; print('All packages installed successfully!')"
```

Expected Output: All packages installed successfully!

Step 5: Start the Backend (FastAPI)

Open Terminal 1

Activate virtual environment: **venv\Scripts\activate**

Start the backend server: **uvicorn app.main:app --reload --host 0.0.0.0 --port 8000**

Wait for this message:

INFO: Application startup complete.

INFO: Uvicorn running on http://0.0.0.0:8000

Keep this terminal open! Do not close it.

Verify Backend is Running:

- Open browser: <http://localhost:8000/health>
- You should see: {"status":"healthy","service":"Personalized Networking Assistant","version":"1.0.0"}

Step 6: Start the Frontend (Streamlit)

Open Terminal 2 (New Command Prompt)

Activate virtual environment: **venv\Scripts\activate**

Start the frontend server: **streamlit run frontend/streamlit_app.py**

You can now view your Streamlit app in your browser.

Local URL: <http://localhost:8501>

Network URL: <http://192.168.1.xxx:8501>

Keep this terminal open! Do not close it.

Step 7: Access the Application

Open Your Browser and Go To:

Service URL

Frontend UI <http://localhost:8501>

API Docs <http://localhost:8000/docs>

Backend API <http://localhost:8000>

Health Check <http://localhost:8000/health>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	GPT-2 Inference Time – The GPT-2 model takes 300-700ms to generate conversation starters, which may feel slow to users	Workaround: Use distilgpt2 for faster inference (200-400ms). Status: Future optimization planned
2	JSON File-Based Storage – Using JSON files limits scalability for multiple concurrent users and may cause file locking issues	Workaround: Not recommended for production. Status: Future migration to PostgreSQL planned
3	No User Authentication – Users cannot create accounts or log in; all data is stored locally per session	Workaround: Currently designed for local/single-user use. Status: Authentication is a future enhancement
